

IM Maggia Engineering AG is a leading engineering company with headquarters in Locarno and several branch offices in Switzerland. Around 270 committed employees in the company group ensure the competent implementation of our assignments. Our core competences are the planning and realization of demanding infrastructure projects in the fields of hydraulic engineering, underground construction, civil engineering and building construction as well as traffic facilities in the fields of energy, telecommunications and control technology as well as traffic and tunnel technology.

To complement our specialists in the Energy Systems and Power Plant Equipment Department, we are looking for a

### **Project Engineer Electrical Engineering ETH/FH** **Field of study: energy technology**

**Your mission:** You will work in interdisciplinary teams on medium to complex projects in the field of power plants and energy supply infrastructures. As a sub-project manager, you will manage the planning of electromechanical equipment, including its control and monitoring with higher-level control systems, throughout all project phases. This includes the conception, the project planning, the tender specification, the implementation support of suppliers up to the installation and commissioning as well as the handover to the operation. You proactively coordinate your activities with entrepreneurs, members of the project team and externally with our customers.

**Your profile:** As a Dipl.-Ing. (Bachelor, Master or equivalent) you ideally have about ten years of practical experience in the fields of electrical engineering, automation or energy technology. In addition to your technical skills, you are a native German or French speaker, able to write technical reports easily and have good verbal skills. You are able to perform precise and thorough work, both independently and as part of a team. Proven experience in the field of power plant control systems as well as Italian and English language skills are advantageous.

**We offer:** An interesting and challenging task from a technical and project management point of view. You will be embedded in a collegial work structure and integrated into our exciting projects right from the start. The training takes place "on-the-job" and we offer you a high degree of independence and frequent customer contact. "You will work in Locarno".

**Do you feel addressed?** Your future line manager, Mr. Alexander Angermayr, 091 756 68 46, will be happy to answer any questions you may have. Please send your application documents to our address below with the note "Personnel department" or to [personal@im-maggia.ch](mailto:personal@im-maggia.ch).
